FEDERAL SIGNAL Safety and Security Systems

Advancing security and well-being.

2645 Federal Signal Drive, University Park, IL 60466

FOR IMMEDIATE RELEASE

Score a touchdown for public safety and security at IACP

Federal Signal's total solutions help police to prepare communities for what's next

IACP 2008, San Diego, Calif., November 7, 2008 — Now more than ever, the well-being of communities and citizens everywhere depends on enhanced public safety and security. As a result, law enforcement leaders turn to Federal Signal (NYSE:FSS) for technology-enhanced systems to protect people, property and the environment — every day.

Play it forward with advanced technology

At the 115th International Association of Chiefs of Police (IACP) annual conference and exhibition in San Diego, Calif, Federal Signal will unveil a suite of total solutions that help police protect and serve communities and citizens around the world. Federal Signal (Booth #1837) also will demonstrate how the company's technologies give officers the offensive edge they need to serve and protect communities and citizens like never before. Federal Signal's total solutions for law enforcement leaders include:

- The **Federal Signal BOSS[®] 3.0** automated license plate recognition (ALPR) back office software by PIPS enables efficient management of multiple mobile and fixed camera deployments, users and hotlists. BOSS 3.0 scales to support larger public safety deployments and regional agency data sharing and enhances intelligence and investigations by enabling multi-jurisdictional ALPR networks.
- The **Federal Signal** low-profile automated license plate recognition (ALPR) camera by PIPS propels edge processing to the next level. The radically lower profile camera does not hinder performance of today's low profile lightbars, and also lowers cost of ownership by about 20 percent. An onboard platefinder analytic tool pushes processing to the edge to minimize the burden on the ALPR processor.
- The new **Federal Signal ILS interior lightbar system**, is a super sleek lightbar designed for slick top and undercover law enforcement applications with all the functionality of a roof-mounted lightbar, including ultra-bright takedowns.
- Place high-output LED lighting just about anywhere on a police vehicle with the new **Federal Signal IMPAXX[™] and Federal Signal ViperEXT[™] interior/exterior warning lights**.
- The **Federal Signal Legend[™] LED lightbar** now offers the patented **HotFoot[™]** feature to project powerful bright white LED alley and takedown light for additional warning protection and flexibility in lightbar configuration.
- The **Federal Signal Sliver[™] portable ALPR system** packages PIPS' proven performance and effectiveness for extreme portability. This new system can be deployed in minutes for use in unmarked vehicles, for rapid deployment in special events, or where a dedicated vehicle is not available.
- The **Federal Signal SmartMSG critical communications system** provides alerting, notification and interoperability for first responders. Reliable, redundant, and secure

communications from any device to any device is a snap with the SmartMSG system—now enhanced with a real-time XML interface to enable services.

- The ***Federal Signal VelocityCAM™ in-car data and video system*** changes the face of digital in-car video for police. This powerful integrated system significantly lowers the cost of in-car video and offers a rich feature set unlike any other system on the market. The Virtual DVR feature eliminates the need for a trunk mounted separate DVR processor or other storage medium.

See Federal Signal in action at IACP 2008

Check out Federal Signal's total solutions for law enforcement first responders at IACP 2008 in San Diego, Calif., in booth #1837. Federal Signal's advanced law enforcement technology will also be hard at work in the exhibits of our world-class partners, including AT&T, Carbon Motors, Motorola and T3 Motion. Also, Federal Signal leaders will offer a glimpse at how advanced technology solutions can enhance the vital work of law enforcement first responders visit us at noon on Monday, Nov. 10, 2008, in the IACP 2008 Solutions Presentation Theater for our briefing.
